## 新型號貨車有助減低溫室氣體 及空氣污染物排放 致力減少對環境負擔

HKTVMall 業務持續增長，我們一直積極拓展物流團隊以強化每日配送容量，滿足顧客需求。現時 HKTVMall 擁有全港最大的住宅配送物流團隊，約有350部貨車每日穿梭全港，務求將顧客訂購的貨品，以完好無缺的狀態準時送到客人府上。

與此同時，HKTVMall亦肩負社會責任，致力減低車輛排放廢氣對空氣質素的影響，因此HKTVMall將會引入廢氣排放標準至「歐盟六期診斷系統階段D」的24公噸貨車，用作運送急凍食品到各個物流中心，其排放性能比法定廢氣排放標準更佳，同時積極考慮採用生物柴油取代傳統柴油，期望有助減低產生溫室氣體和部份空氣污染物的排放，減少對環境的負擔，為保護環境出一分力。

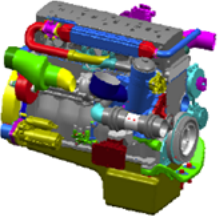

早於HKTVMall開業時，我們已建立自家的派送團隊，現時每日約有350部送貨車運作

我們最新引入的歐盟六期診斷系統階段D貨車採用直列六氣缸引擎（Inline Six-cylinder Engine），內置廢氣再循環冷卻系統（EGR）的EGR率為25%，配合微粒過濾器（DPF）及BlueTec 廢氣處理（SCR），有助進一步減少氮氧化物、二氧化碳及

微粒排放。

與歐盟五期型號相比，新型號貨車的耗油量可降低 3至4%，有效節省能源。而新型號貨車可使用生物柴油作汽車燃料，即是以菜油、動物脂肪、煮食廢油等製成的可再生燃料，有助減少溫室氣體排放。

## New Model Truck Helps for Reducing The Emission of Greenhouse Gases & Air Pollutants Committed to Reduce Burden on The Environment

HKTVMall's business maintains growth momentum that we devote to strengthen our logistic capacity with the continuous expansion of our delivery fleet. Being the largest residential distribution network in Hong Kong, HKTVMall operates more than 350 delivery trucks daily and shuttling around Hong Kong, so that the products can be delivered to the customers on time in perfect conditions.

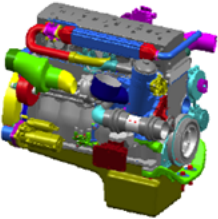

In parallel to this, HKTVMall shoulders social responsibility to reduce the impact of vehicle emissions on air quality, that we will soon introduce a new model 24 tonnes truck with the qualifying standard of "Euro VI On-Board Diagnostics (OBD) Phase D", which will be used to transport frozen products to various logistics centers. Its exhaust emissions outperform the prevailing statutory emission standards, as well as actively considering for the use of Biodiesel instead of traditional diesel. We hope that these measures can help to reduce the emission of greenhouse gases and air pollutants, as well as reducing the burden on the environment and contributing to environmental protection.

*Since the establishment of HKTVMall, we have started to build our self-managed distribution fleet, and currently have about 350 trucks in operation daily.*

The new truck with qualifying standard of "Euro VI OBD Phase D" uses the Inline Six-cylinder Engine, cooled exhaust-gas recirculation (EGR) with an EGR rate of 25%, particulate filter (DPF) and BlueTec exhaust-gas treatment (SCR), which further helps to reduce nitrogen oxides, carbon dioxide and particulate emissions.

Compared with the Euro V, the fuel consumption of the new model truck can be reduced by 3 to 4%, effectively saving energy. In addition, the new truck can use biodiesel, which is a renewable fuel manufactured from vegetable oils, animal fats, waste cooking oil, etc., that helps to reduce greenhouse gas emissions.
