

Talent Training - Introduction to Python

We take pride in the diverse backgrounds of our team members, so our Talents come from different fields. To support the personal growth of every Talent, we regularly host workshops that welcome everyone to learn and grow together, regardless of their experience.

We held a beginner-friendly Python workshop for those with no prior coding experience. Our Talents gained hands-on experience with Python, exploring how it could help complete simple tasks in everyday work.

The workshop helped them better understand Python scripts written by others and provided a strong foundation for them to explore further on their own in the future.
